EQUIPMENT:

Equipment and systems covered by this Certificate are as follows:

The Magbar's body is constructed from 316L stainless-steel, which contains the encapsulated electronics and electromagnetic coils. The silicon-steel core is partially exposed to facilitate the interlock with a separate metallic armature plate (keeper). The equipment is supplied with a flying lead, which requires suitable termination at installation and can be supplied with various length cords. Optional electronics allow for integration with different door sensing alarm and control systems.

Voltage: 12 or 24V dc Current 0.8A or 0.4A

Fuse Required: 1A (12V) or 0.5A (24V)

SPECIFIC CONDITIONS OF USE: YES as shown below:

Special Conditions for Safe Use

• The electrical supply system must be provided with a suitable in line fuse and appropriate prospective short circuit protection to match the selected fuse.

Conditions of Manufacture

- Each unit must be subjected to a visual inspection of the encapsulation compound in accordance with clause 9.1 of EN/IEC 60079-18. No visible damage of the compound shall be evident, such as cracks, exposure of the encapsulated parts, flaking, impermissible shrinkage, discoloration, swelling, decomposition, failure of adhesion or softening.
- A Dielectric strength test must be made on each unit in accordance with clause 9.2 of EN/IEC 60079-18 at 500Vac or 700VDC for 1 second. Alternatively, the test can be carried out at 1.2 times the test voltage for 100ms.
